PCT

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

Assistant Commissioner for Patents United States Patent and Trademark Office

Box PCT Washington, D.C.20231 ÉTATS-UNIS D'AMÉRIQUE

Date of mailing (day/month/year) 08 February 2000 (08.02.00)	in its capacity as elected Office		
International application No. PCT/GB99/02199	Applicant's or agent's file reference PG3506/PCT		
International filing date (day/month/year) 09 July 1999 (09.07.99)	Priority date (day/month/year) 11 July 1998 (11.07.98)		
Applicant			

The designated Office is hereby notified of its election made:

X in the demand filed with the International Preliminary Examining Authority on:

20 December 1999 (20.12.99)

- in a notice effecting later election filed with the International Bureau on:
- 2. The election X was

BRADDOCK, Martin et al

was not

made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).

The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20. Switzerland Authorized officer

Jean-Marc Vivet

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1. X Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely: Remark: Although claims 16 and 21 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
2. Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows:
As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.

(54) Title: PHARMACEUTICAL USES OF NAB1 AND NAB2

(57) Abstract

The invention relates to the use, particularly in gene therapy, of an NAB1 or NAB2 polypeptide or a biologically active fragment thereof, and to nucleic acid molecules encoding such polypeptides, in the manufacture of a medicament for the treatment of cell proliferation disorders associated with wound healing in a mammal, including human.

International application No. PCT/GB99/02199

I. Basis of the report

1. This report has been drawn on the basis of (substitute sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to the report since they do not contain amendments.): Description, pages: as originally filed 1-37 Claims, No.: as originally filed 1-22 Drawings, sheets: as originally filed 1/10-10/10 2. The amendments have resulted in the cancellation of: ☐ the description, pages: Nos.: ☐ the claims, ☐ the drawings, sheets: 3.

This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)): 4. Additional observations, if necessary: III. Non-establishment of opinion with regard to novelty, inventive step and industrial applicability The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), or to be industrially applicable have not been examined in respect of: ☐ the entire international application. ☑ claims Nos. 1-22 with respect to industrial applicability.

EXAMINATION REPORT - SEPARATE SHEET

Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

Claims 1-22 relate to subject-matter considered by this Authority to be covered by the provisions of Rule 67.1(iv) PCT. Consequently, no opinion will be formulated with respect to the industrial applicability of the subject-matter of these claims (Article 34(4)(a)(i) PCT).

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: Journal of Cell Science, vol. 107, 1994, 1137-1157

D2: Proc. Natl. Acad. Sci., USA, vol. 93, 1996, 11831 - 11836

D3: US5036006 D4: US5697901

- 1. The claims of the present application do not meet the requirement of Art. 33(3), PCT with regard to inventive step.
- 1.1 D1 represents the closest prior art and discloses the pivotal role of TGF-Beta1 in wound healing. The document discloses that addition of a neutralizing antibody to TGF-Beta1,2 reduces scar formation after cutaneous injury. Early application of antibody achieved good results, whereby the effects are stated as probably being due to reduction in level of TGF-Beta at the wound site. See page 1150, paragraph 3 - page 1155, paragraph 1.

The subject matter of claims 1, 14-17, 21, 22 differs from D1 in that an NAB1 or NAB2 polypeptide or encoding nucleic acid is a technical feature of each of these claims. The problem to be solved is to provide alternative means of treating cell proliferative disorders associated with wound healing.

D2 discloses the effects of Egr-1 on induction of TGFBeta1 in fibrosarcoma cells, and that addition of TGF-Beta1 is strongly growth-suppressive for the cells. Addition of anti-TGF-beta1 antibody is shown to reverse the Egr-1 mediated growth inhibitory effects on the fibrosarcoma cells. See page 11831, abstract. It is concluded that Egr-1 suppresses growth of the cells via induction of TGF-Beta1. Additionally, mention is made on page 11834, paragraph 3 - page 11835, paragraph 1, that the presence of the Egr-1 corepressors NAB1 and NAB2 may be reducing the activation of TGF-Beta by Egr-1 in the cells being studied. To test this, transactivation of a TGF-Beta1 reporter constuct by Egr-1 mutants unable to interact with NAB1 and NAB2 was studied. Higher levels of transactivation were achieved in such a study (see figure 5 on page 11835), from which the skilled person would conclude that NAB1 and NAB2 have a repressing effect on TGF-Beta1 activity via interaction with Egr-1.

Aware from D1 that suppression of the effects of TGF-Beta1 by antibody (ie repression of TGF-Beta1 by a method other than that of the present application) can have beneficial effects in improving wound healing via mechanisms including decreasing macrophage and monocyte numbers at the wound site (D1, above passages), and aware from D2 that NAB1 / NAB2 can repress TGF-Beta1 via Egr-1, the skilled person, seeking to solve the above-mentioned problem, would seek to achieve desirable down regulation of TGF beta1 in wound healing by methods other than that of D1, including, in light of D2, by the use of an NAB1 or NAB2. The use of NAB1 or NAB2 for the treatment of cell proliferative disorders associated with wound healing would thus be arrived at by the skilled person without exercising inventive skill. Since it is additionally of common knowledge to the skilled person that the in vivo effects of a polypeptide may be expected to be achieved by the in vivo delivery of a nucleic acid encoding such, the subject matter of claim 1 would be arrived at by the skilled person without exercising inventive skill, and the claim lacks inventive step.

The subject matter of independent claims 14, 15, 16, 17, 21 and 22 is also not inventive for the reasons given for claim 1.

1.2 The additional features of dependent claims 2-13 and 18-20 amount to those of common practise in the art and the claims are not inventive. In particular, those features of claims 8-11 relating to physical methods of nucleic acid delivery are disclosed in D3 (particle bombardment, see column 6, line 49 - column 8, line 68) and

INTERNATIONAL PRELIMINARY

International application No. PCT/GB99/02199

EXAMINATION REPORT - SEPARATE SHEET

D4 (microseeding, see column 2, line 66 - column 5, line 20).

2. For the assessment of the present claims 1-22 on the question whether they are industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.

Re Item VII

Certain defects in the international application

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the document D2 is not mentioned in the description, nor is this document identified therein.
